

ENVIRONMENTAL RESPONSIBILITY & SAFETY

SCT's Safety and Environment team implements national and international guidelines and practices as part of our commitment to environmental responsibility and sustainability. French and European environmental regulations maintain some of the highest standards found in the world. We pride ourselves on having a coordinated, integrated and formal approach which allows us to strictly adhere to these guidelines. As part of our commitment, we foster a cultural attitude which promotes environmental awareness and responsibility and guides each individual's actions.

As a manufacturer, the measures we put in place are with the long-term goal of promoting sustainability, while protecting our immediate surroundings. To maintain transparent oversight and as a method of early detection, we regularly run environmental tests. This record of our ecological trends gives us an advantage to identify any risks and put solutions in place to minimize the impact on our community and our region.

We look for opportunities to make our operations more sustainable and find ecologically friendly solutions and processes. To reduce our water consumption, we've adopted new techniques to clean our machines. Our waste is sorted into more than 10 categories for recycling, and our machines have diverse sound insulation to reduce disturbance to our immediate environment.

The impact of our Environment and Safety team is recognized throughout SCT. Pursuing sustainability helps us increase our operational efficiency by reducing costs and waste, respond to national and international regulations, build public trust with our clients and our community and protect our region.
